HISTORY

GALLATIN  STEEL

Construction of our Compact Strip Production facility, one of the most technologically-advanced of its kind, began in 1993. We began our start-up operations in the second quarter of 1995.

We currently produce more than 1.4 million tons of hot band coils on an annual basis. Gallatin Steel's state-of-the-art manufacturing facility features a twin-shell DC electric arc furnace, a ladle metallurgy facility, a thin-slab continuous caster and a six-stand hot finishing mill.

Producing coils up to 1050 PIW from 42.5 to 64 inches wide at various gauge and grades, we tailor make our products to satisfy our customers' needs.

Our steel manufacturing facility is located along the banks of the Ohio River on U.S. 42 in Gallatin County, Kentucky, USA. Less than an hour from both Louisville and Cincinnati, we are close to interstate highways, waterways and rail lines.

Shaping the future. Precisely.

INDUSTRIAL PRODUCTS GROUP

OVERVIEW

Novelis' Industrial Products Group (IPG) is an unincorporated business group within the Novelis group of companies comprised of portions of Novelis, Inc. and selected direct and indirect subsidiaries having common business interests in the fabrication and sale of aluminum sheet for industrial applications.

The group is headquartered in Cleveland, Ohio and primarily serves markets in North America from separate Novelis entities located in the U.S. and Canada.

In addition, our capabilities extend beyond North America to Korea, South America and Europe.

[About Aleris](#)[Business Segments](#)[Environmental](#)[Investor](#)[Careers](#)[Employees](#)

Did you
Know?

Aluminum has sustained recyclability - it can be processed time and time again without material decline in quality or performance.

Aleris International, Inc. resulted from the merger of Commonwealth Industries, Inc. and **IMCO Recycling Inc.** on December 9, 2004. This strategic combination created a vertically integrated aluminum recycler and common-alloy sheet manufacturer. Aleris has more than \$2 billion in annual net sales (based on last twelve months), 3,200 employees and 29 production facilities worldwide. The company has a leading global position in aluminum recycling and specialty alloys, a leading position in North American aluminum sheet production, and a leading position in U.S. zinc recycling and the production of value-added zinc products. The merged company advances the successful business model that Commonwealth and IMCO have developed, which is built on the integration of focused competitive strengths, complementary facility locations and cost-effective, technologically advanced manufacturing processes.

ABOUT US

CAREERS

HOME

Upon completion of a feasibility study in September, 1977, **All-Weather Insulation Co.** was formed and a cellulose manufacturing plant was established. Thomas W. Clements, who remains with the company today, was involved in the cellulose insulation industry in the Chicago area. Realizing there was a shortage of cellulose at that time, Tom came to Springfield, KY and discussed the idea of starting a cellulose manufacturing facility with his brother, John Pat Clements. They determined that if they could sell one truckload of cellulose per day the company would be successful. The insulation industry grew rapidly during the 1970's. However, once the energy crisis was over, there were major shake-ups in cellulose manufacturing. At the time, there were 22 manufacturing plants operating in Kentucky, but once the CPSC was finished, only All-Weather Insulation Co. remained.

In 1982 All-Weather Insulation Co. expanded its business to include the distribution of fiberglass insulation to its customer base. By 1986 the business had grown rapidly and All-Weather found it necessary to build a new distribution warehouse. In addition, a new product--hydroseeding mulch--was developed. This product is made up of ninety percent recycled newsprint with a dye additive. It is used mainly in the coal industry for land reclamation after mining, and in the highway construction industry.

In 1988 All-Weather Insulation Co. began producing metal building insulation. This insulation, used in post frame and steel buildings, is produced by laminating various types of vinyl facings to a fiberglass blanket. It is available in numerous sizes and thickness and most often is custom-made based on building dimensions.

At the present time, All-Weather Insulation Co. is one of few distributors that offer a full line of insulation and accessories, in addition to a support team that assists its customers in accomplishing any project they may have.

Innovative Brands For Everyday Life

Making a Difference In People's Lives

What's K-C about? Well-known brands. Innovation. Technology. Leadership. We're a global team of more than 62,000 people, organized into three global segments—Consumer Tissue, Personal Care and Business-to-Business—who share a passion for finding new ways to improve people's lives.

A Global Health and Hygiene Leader

K-C and its well-known brands are an indispensable part of life for people in more than 150 countries. Every day, 1.3 billion people — nearly a quarter of the world's population — trust our brands to enhance their health, hygiene and well-being — brands such as Kleenex, Scott, Huggies, Pull-Ups, Kotex and Depend.

We maintain strict corporate policies that emphasize sustainability and sound environmental practices as cornerstones of doing business. That includes one of the most progressive sustainable forestry policies in the tissue industry.

We recently were selected as **the sustainability leader in the Personal Products sector of the 2006 Dow Jones Sustainability World Indexes** reflecting our commitment to creating sustainable growth and shareholder value. We earned the highest scores in the sector for a number of criteria, including corporate governance, environmental and social reporting, and environmental management systems.

Kimberly-Clark is also a member of the World Business Council for Sustainable Development and the Sustainable Forest Products Industry Working Group, the latter of which is working in partnership with the World Wildlife Fund on the recognition and use of forestry schemes.

Environment

Weyerhaeuser is a leader in an industry whose activities rely on natural resources and our role as environmental stewards is one of the most important we play.

Weyerhaeuser and the Environment provides highlights of our environmental practices. Since 1971, our **environmental policy** has outlined our commitments and guided our behavior. A similar policy guides our efforts to protect the health, safety and well being of Weyerhaeuser people. We highlight these policies in our *Roadmap for Sustainability: The 2004 Citizenship and Environment Report*.

Weyerhaeuser was founded more than 100 years ago, the company had a singular focus: timberlands. Today, Weyerhaeuser is an innovator—both in the management of our forestry holdings and in the development of new ways to utilize this renewable resource. From the seedlings and forests of our timberlands section to the production of building products and cellulose fibers, paper and packaging, these sections provide information about our wide selection of forest products. You can also learn how we use transportation to move products to market, or real estate development to plan communities and commercial developments.
